

Press Release

Git Client Tower now with Enterprise Support

Tower 2.3 extends support for enterprise Git hosting services

Berlin, Germany - September 29, 2015. Today, [fournova](#) announces the release of [Tower 2.3](#), a significant improvement of its popular Git client.

The new version extends the support of existing services and adds new platforms to its feature set. Supported enterprise services include the major Git hosting services GitHub Enterprise, Atlassian Stash/Bitbucket, Gitlab and Perforce GitSwarm. After connecting their account once users will never have to worry again about usernames, passwords and authentication methods. They will be able to:

- create new repositories with a single click
- create new repositories in their account right from within Tower
- and manage their SSH public keys and account details

Besides these new features [fournova](#) also updated Tower for Apple's new operating system El Capitan. With the latest version the app fully supports the latest OS.

Additional features include the support for Bitbucket team accounts and 2-step verification.

Tower 2.3 comes as a free upgrade for Tower 2 users. New licenses are available for \$69.

About [fournova](#):

[fournova](#) is a startup based in Germany. Its popular desktop app Tower helps over 50,000 customers from startups to Fortune 100 companies to easily and productively work with the Git version control system.
